

SMART Labs

5 Components

7 Philosophical Principles

Business & Entrepreneurship,
for students that like
information and the
business environment.

Audio & Video,
for students that
like to be creative.

Health & Education,
for students who like
to help others.

Science & Engineering,
for students who like to
know how things work.

The GREAT Academy is a FREE, public charter school serving high school students in grades 10-12. The school's goal is to provide the families of Albuquerque with an educational option that will allow students to gain real world experience through active transition. The learning environment is one in which five basic components will be emphasized: virtual learning, Academic Improvement Plans (AIP) for all students, service learning, leadership and character education and pathways to success (career pathways and a college preparatory pathway). We believe that these components are an integral part in helping students to be well-rounded, productive participants in their communities.
